

TG/53/7(proj.2)  
**ORIGINAL:** English  
**DATE:** 2010-02-10

**INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS**  
 GENEVA

**DRAFT**

**PEACH**

UPOV Code: PRUNU\_PER

*Prunus persica (L.) Batsch*

\*

**GUIDELINES**

**FOR THE CONDUCT OF TESTS**

**FOR DISTINCTNESS, UNIFORMITY AND STABILITY**

*prepared by an expert from France*

*to be considered by the*

*Technical Committee at its forty-sixth session,  
 to be held in Geneva from March 22 to 24, 2010*

Alternative Names:<sup>\*</sup>

<i>Botanical name</i>	<i>English</i>	<i>French</i>	<i>German</i>	<i>Spanish</i>
<i>Prunus persica (L.) Batsch,    Persica vulgaris Mill.,    Prunus L. subg. Persica</i>	Peach	Pêcher	Pfirsich	Durazno, Melocotonero

The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

**ASSOCIATED DOCUMENTS**

These Test Guidelines should be read in conjunction with the General Introduction, its associated TGP documents and the Test Guidelines for Prunus Rootstocks, document TG/187/1.

\* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website ([www.upov.int](http://www.upov.int)), for the latest information.]

## 1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of peach (including nectarine) of the species *Prunus persica* (L.) Batsch. For the examination of hybrids involving *Prunus persica* (L.) Batsch, guidance is provided in document TGP/13 “Guidance for New Types and Species”.

## 2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of grafted trees, on a peach rootstock to be selected by the competent authorities.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

5 grafted trees.

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

## 3. Method of Examination

### 3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be two independent growing cycles. In particular, it is essential that the trees produce a satisfactory crop of fruit in each of the two growing cycles.

### 3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 “Examining Distinctness”.

### 3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within

the tolerances set out in the British Standard 950, Part I. These determinations should be made with the plant part placed against a white background.

### **3.4 Test Design**

3.4.1 Each test should be designed to result in a total of at least 5 trees.

3.4.2 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made up to the end of the growing cycle.

### **3.5 Number of Plants / Parts of Plants to be Examined**

Unless otherwise indicated, all observations should be made on 5 plants or parts taken from each of 5 plants. In the case of parts of plants, the number to be taken from each of the plants should be 2.

### **3.6 Additional Tests**

Additional tests, for examining relevant characteristics, may be established.

## **4. Assessment of Distinctness, Uniformity and Stability**

### **4.1 Distinctness**

#### **4.1.1 General Recommendations**

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

#### **4.1.2 Consistent Differences**

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

#### **4.1.3 Clear Differences**

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

#### 4.2 *Uniformity*

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 For the assessment of uniformity, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 5 plants, no off-types are allowed.

#### 4.3 *Stability*

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be tested, either by growing a further generation, or by testing a new plant stock to ensure that it exhibits the same characteristics as those shown by the previous material supplied.

### 5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Flower: type (characteristic 9)
- (b) Petiole: shape of nectaries (characteristic 31)
- (c) Fruit: pubescence of skin (characteristic 45)
- (d) Fruit: carotenoid coloration of flesh (characteristic 52)
- (e) Fruit: acidity (Acidity titrable) in meq 100/ml (characteristic 58) with the following groups:
  - low
  - medium
  - high
- (f) Fruit: flesh type (TQ characteristic), with the following groups:
  - melting
  - non-melting (pavies)
  - stony hard
- (g) Stone: adherence to flesh (characteristic 65)
- (h) Time of beginning of flowering (characteristic 68)
- (i) Time of maturity for consumption (characteristic 69)

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction.

## 6. Introduction to the Table of Characteristics

### 6.1 *Categories of Characteristics*

#### 6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

#### 6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by \*) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

### 6.2 *States of Expression and Corresponding Notes*

States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

### 6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

### 6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

### 6.5 *Legend*

(\*) Asterisked characteristic – see Chapter 6.1.2

QL: Qualitative characteristic – see Chapter 6.3

QN: Quantitative characteristic – see Chapter 6.3

PQ: Pseudo-qualitative characteristic – see Chapter 6.3

(a)-(g) See Explanations on the Table of Characteristics in Chapter 8.1

8. Explanations on the Table of Characteristics

8.1 *Explanations covering several characteristics*

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

- (a) Observation on tree size, tree habit, flowering shoot should be made during winter dormancy (Ad. 1, 3, 4, 5), observations on tree vigor should be made during growing period (Ad. 2).

Unless otherwise stated, all observation on the tree or the shoot should be made during winter dormancy.

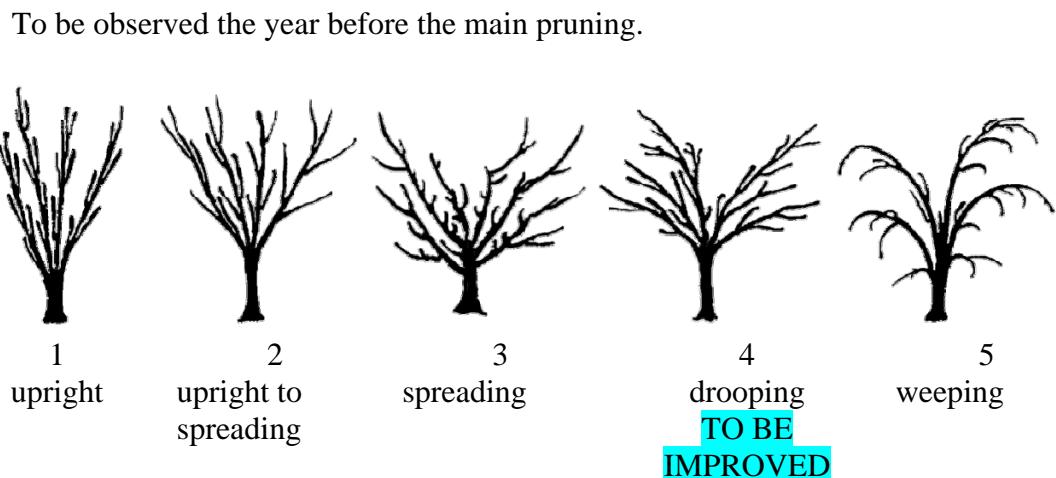

- (b) Unless otherwise stated, all observations on the leaf should be made on fully developed leaves in the central third of a current season shoot.
- (c) All observations on the nectaries (glands) should be made on leaves as soon as they are fully developed.
- (d) All observations on the flowering shoot ('rameau mixte') and the flower should be made in the central third of the shoot.
- (e) Unless otherwise indicated, all observations on the flower should be made on fully opened flowers at the beginning of anther dehiscence. The time of beginning of flowering is reached when 10% of the flowers on the tree are fully opened. The end of flowering is reached at 90% petal fall.
- (f) All observations on the fruit should be made on fruits mature for consumption, when the overall appearance, firmness and taste indicate that the fruit is ready for consumption.
- (g) All observations on the stone should be made on the dry stone after removal of the flesh.

8.2 *Explanations for individual characteristics*

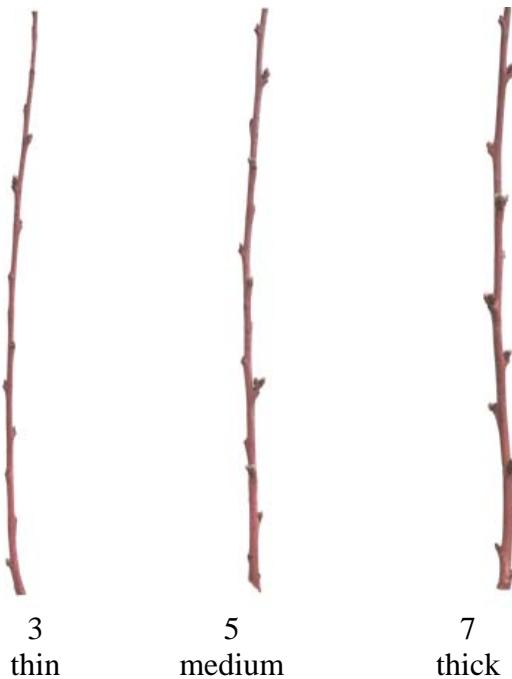

Ad. 2: Tree: vigor

The vigor of the tree should be considered as the overall abundance of vegetative growth.

Ad. 3: Tree habit

Ad. 4: Flowering shoot: thickness

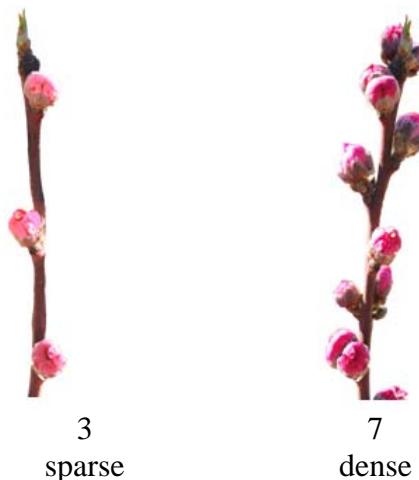

Ad. 7: Flowering shoot: intensity of anthocyanin coloration

The intensity of anthocyanin coloration should be observed on the shaded side of the shoot.

Ad. 8: Flowering shoot: density of flower buds

To be observed along the shoot on one meter.

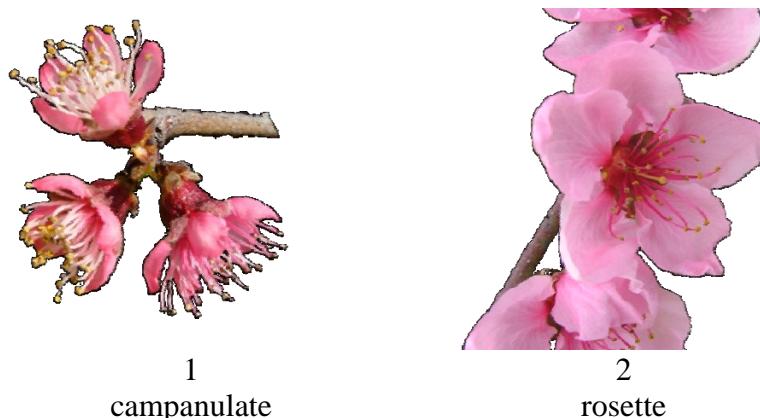

Ad. 9: Flower: type

To observe “just before opening”

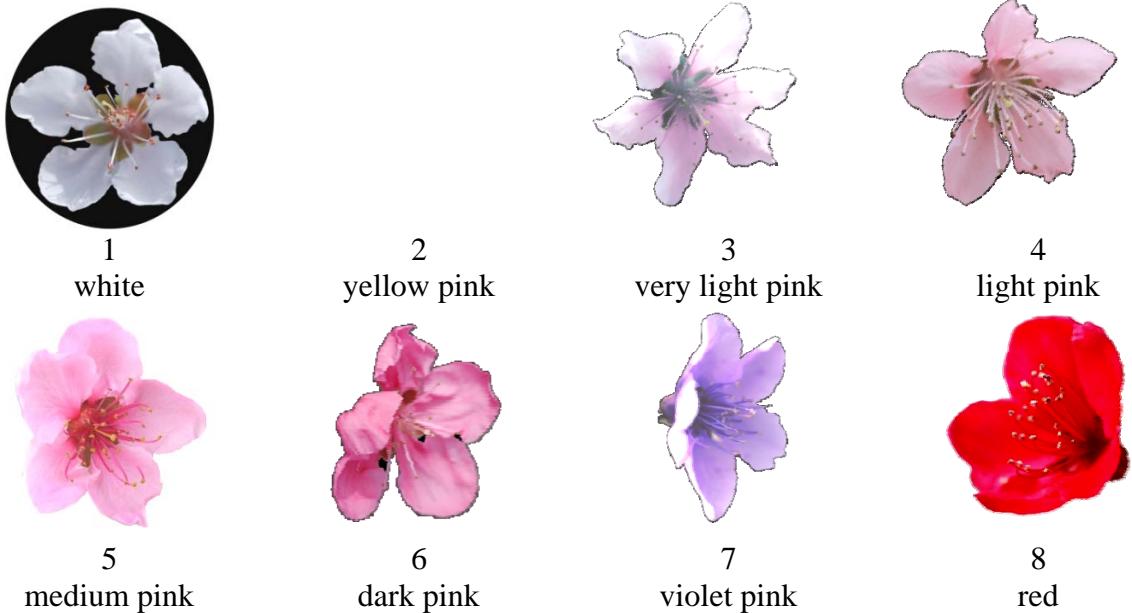

‘Campanulate’ means ‘non showy’, ‘rosette’ means ‘showy’.

Campanulate flowers have smaller petals, their stamens are upper than petals.

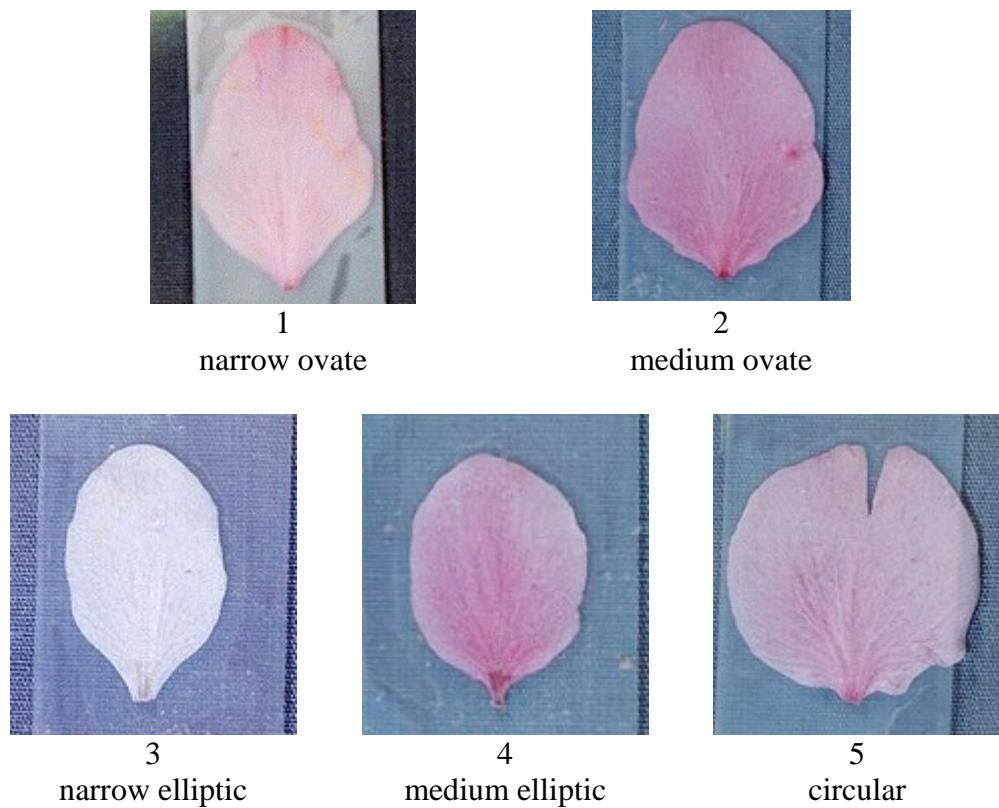

Ad. 10: Corolla: main color (inner side)

The main color is the color with the largest area.

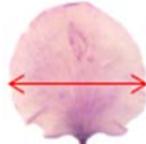

Ad. 11: Petal: shape

Ad. 12: Only varieties with flower type: campanulate: Petal: width

Ad. 13: Only varieties with flower type: rosette: Petal: width

Ad. 14: Flower: number of petals

1  
five

2  
more than five

Varieties with note 1 may have occasional flowers with more than 5 petals and varieties with note 2 may have occasional flowers with five petals.

Ad. 15: Stamen: position compared to petals

1  
below

2  
at same level

3  
above

Ad. 16: Stigma: position compared to anthers

To be evaluated on 25 flowers.

1  
below

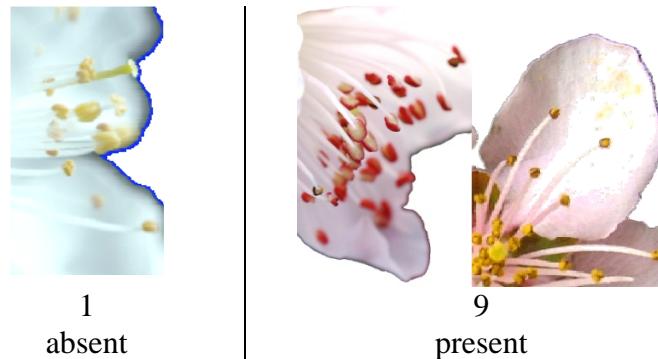

2  
same level

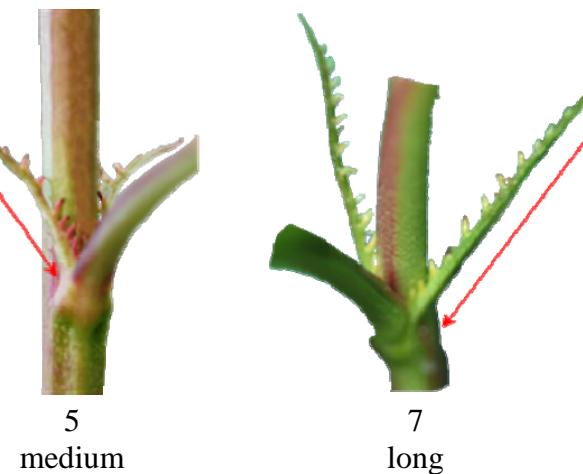

3  
above

Ad. 17: Anthers: pollen

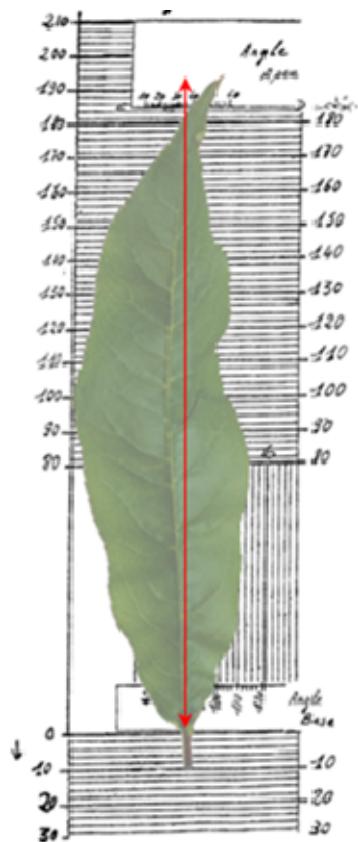

Ad. 19: Stipule: length (on fully expanded leaf on young shoot)

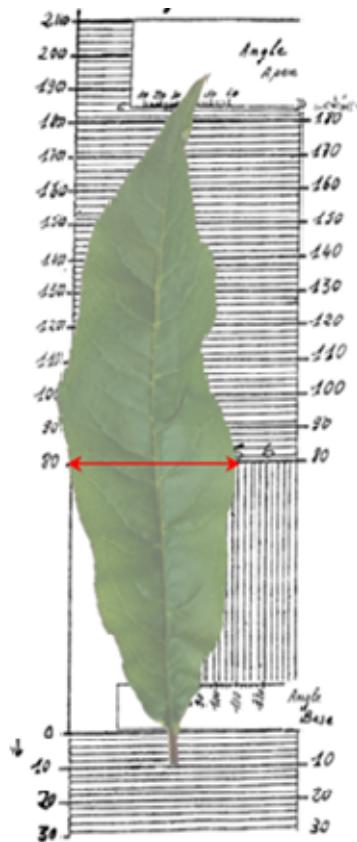

To be evaluated on 25 stipules.

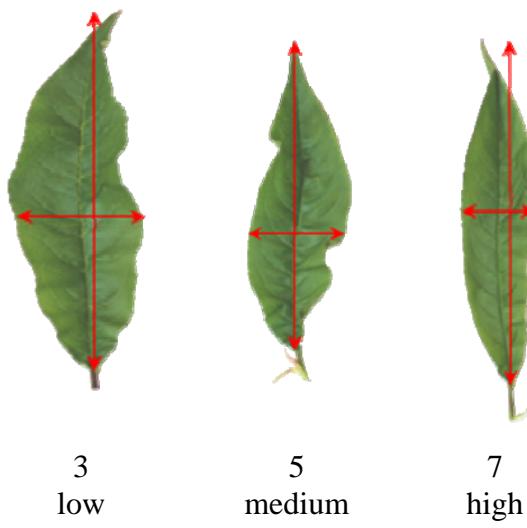

Ad. 20: Leaf blade: length

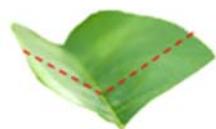

Ad. 21: Leaf blade: width

Ad. 22: Leaf blade: ratio length/width

Ad. 23: Leaf blade: shape in cross section

concave

flat

Ad. 24: Leaf blade: margin

1  
crenate

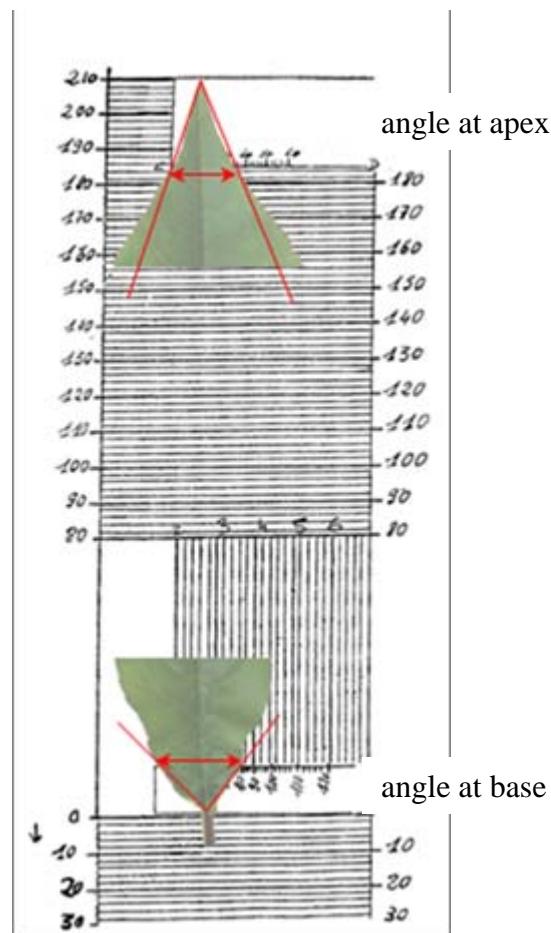

2  
shallow serrate

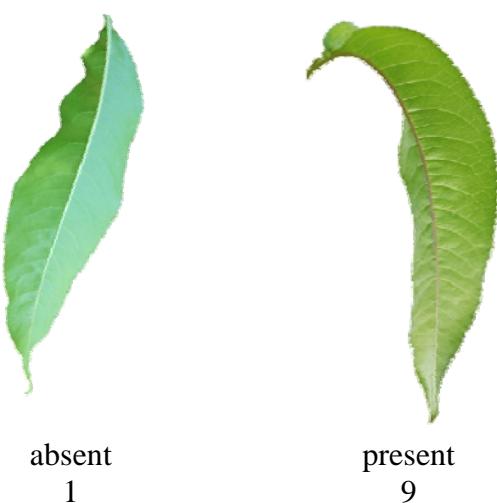

3  
very serrate

Ad. 25: Leaf blade: angle at base

Ad. 26: Leaf blade: angle at apex

Ad. 28: Leaf blade: red mid-vein on the lower side

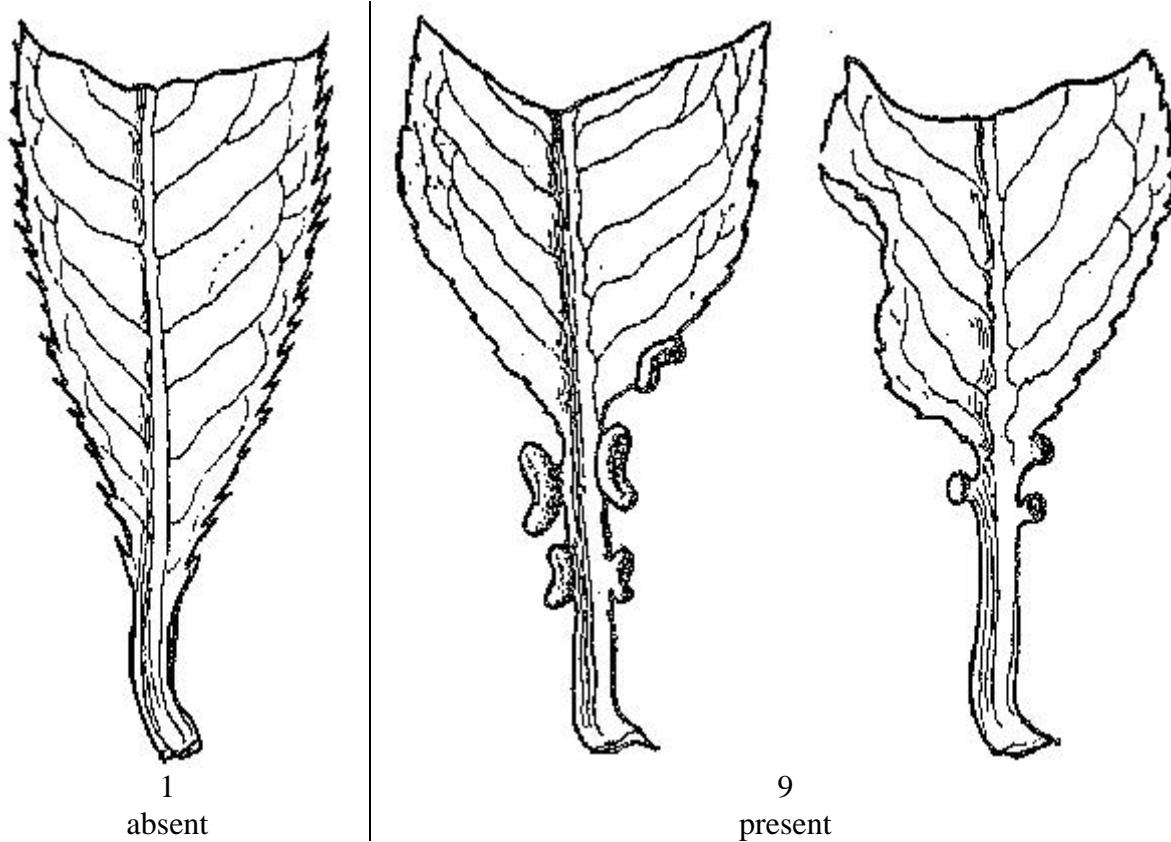

Ad. 29: Petiole: length

To be evaluated on 25 leaves.

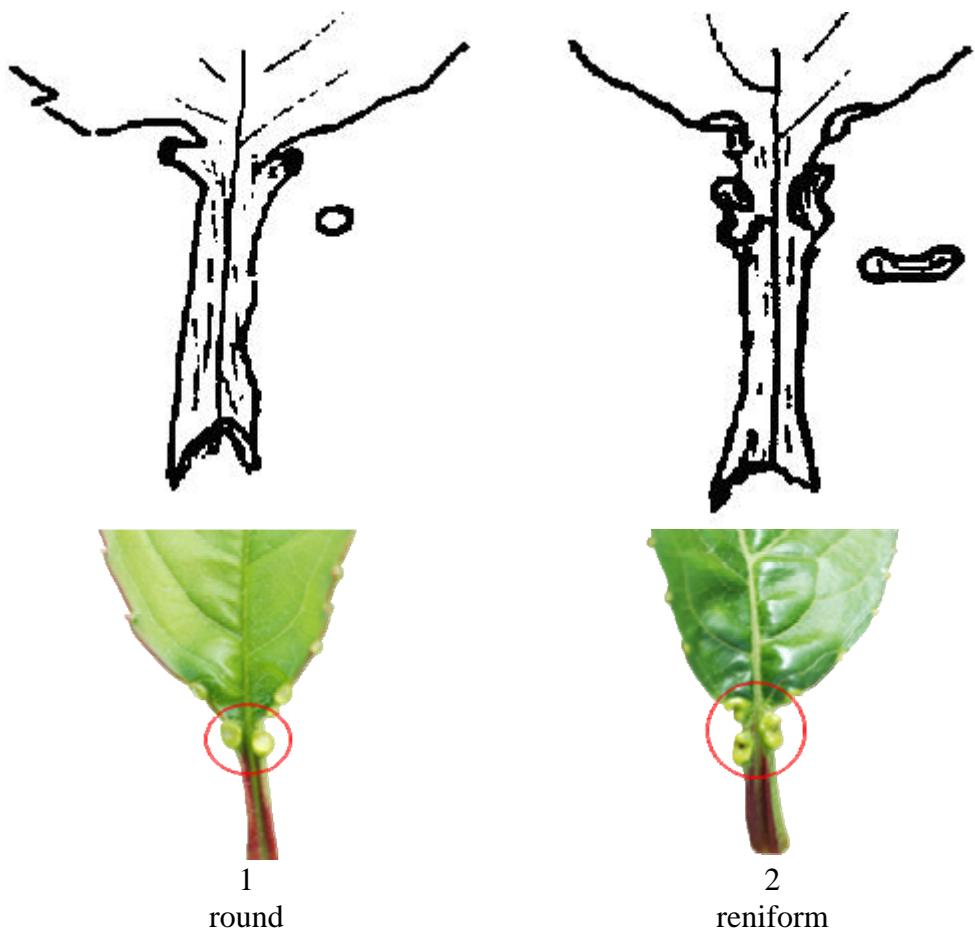

Ad. 30: Petiole: nectaries

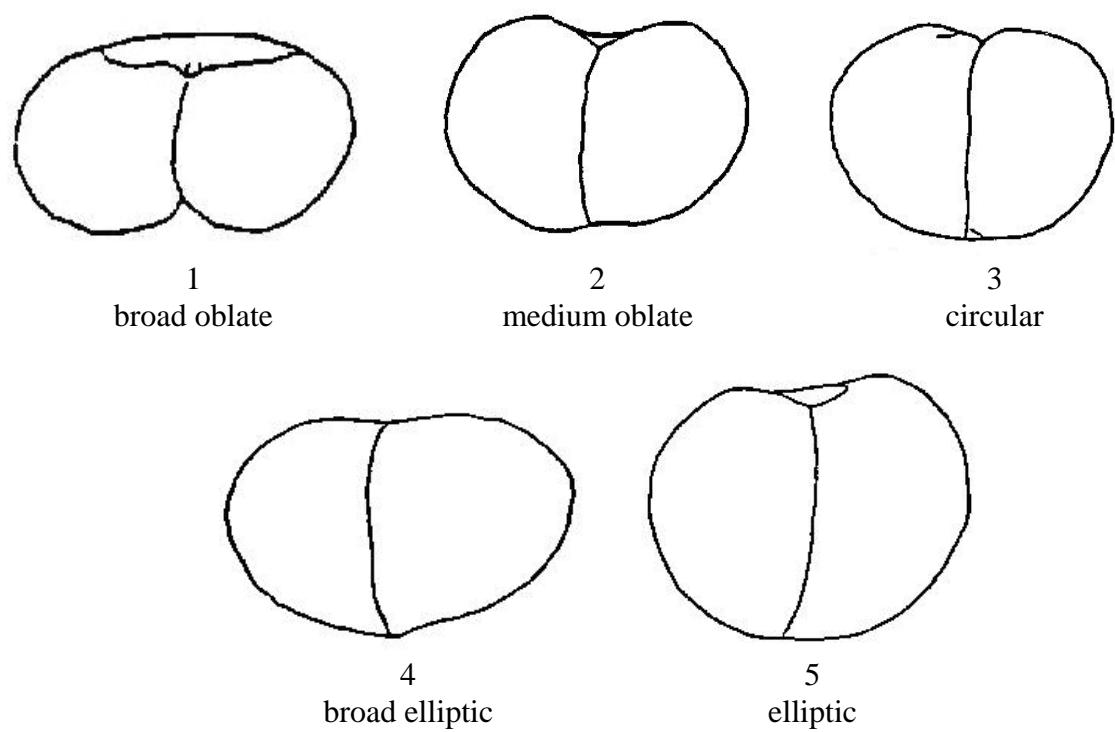

Nectaries are located on the base of the leaf (ref.: Handbook of peach and nectarine varieties – Performance in the Southeastern United States and index of names, W. R. Okie - United State Department of Agriculture - Agriculture Research Service - Agriculture Handbook Number 1714 – May 1998: page 12). This character, both on petiole and leaf, is fluctuant during the season; So, the most important is that the shape and the number of glands, as well as the area (petiole/leaf), must be determined on adult, full-sized leaves of mature trees (*on the young leaves in growth, they are more or less well constituted and on too old leaves, they dry out and fall*), if possible in before harvest, during a short period of one or two weeks for a set of varieties in experimentation / characterization.

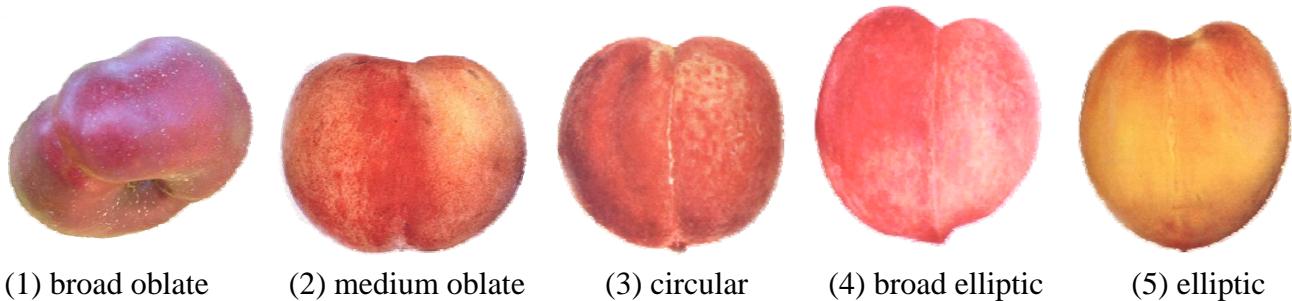

Ad. 31: Petiole: shape of nectaries

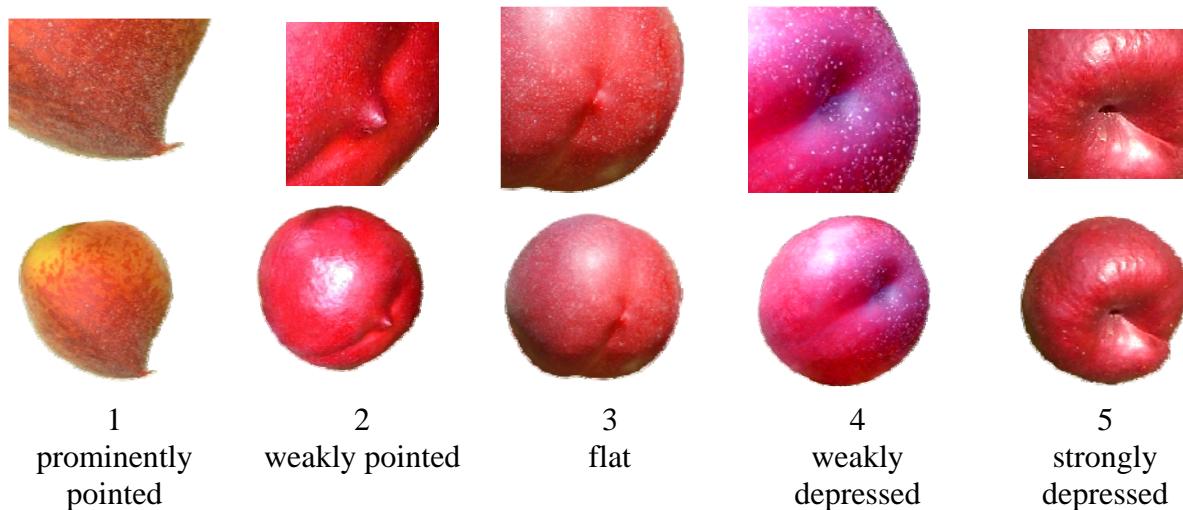

Ad. 33: Frucht: shape (in ventral view)

Ad. 34: Fruit: mucron tip at pistil end

Ad. 35: Fruit: shape of pistil end (without mucron tip)

Ad. 36: Fruit: symmetry (viewed from pistil end)

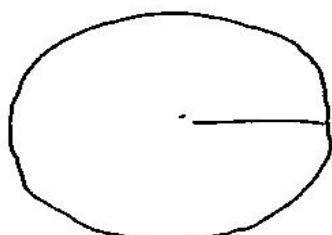

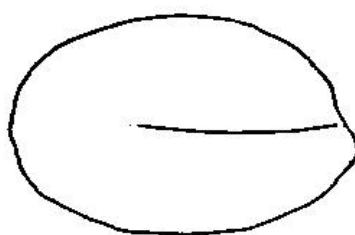

ILLUSTRATION TO BE  
PROVIDED

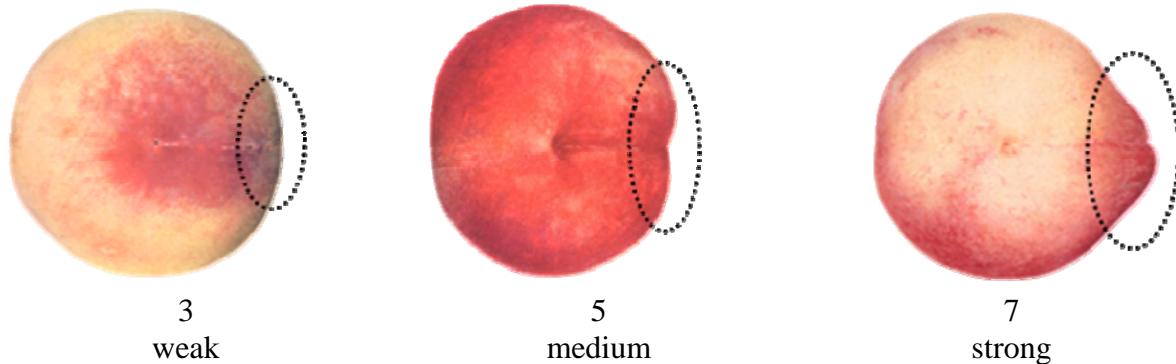

1  
symmetric

2  
moderately asymmetric

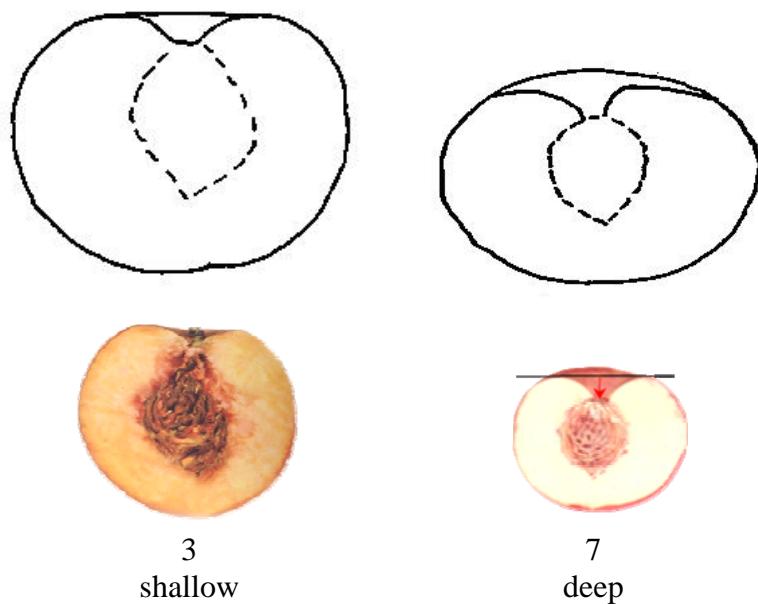

3  
strongly symmetric

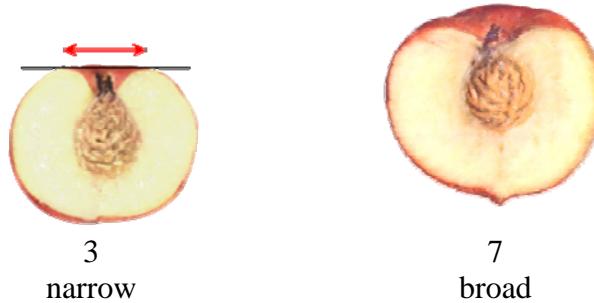

Ad. 37: Fruit: prominence of suture

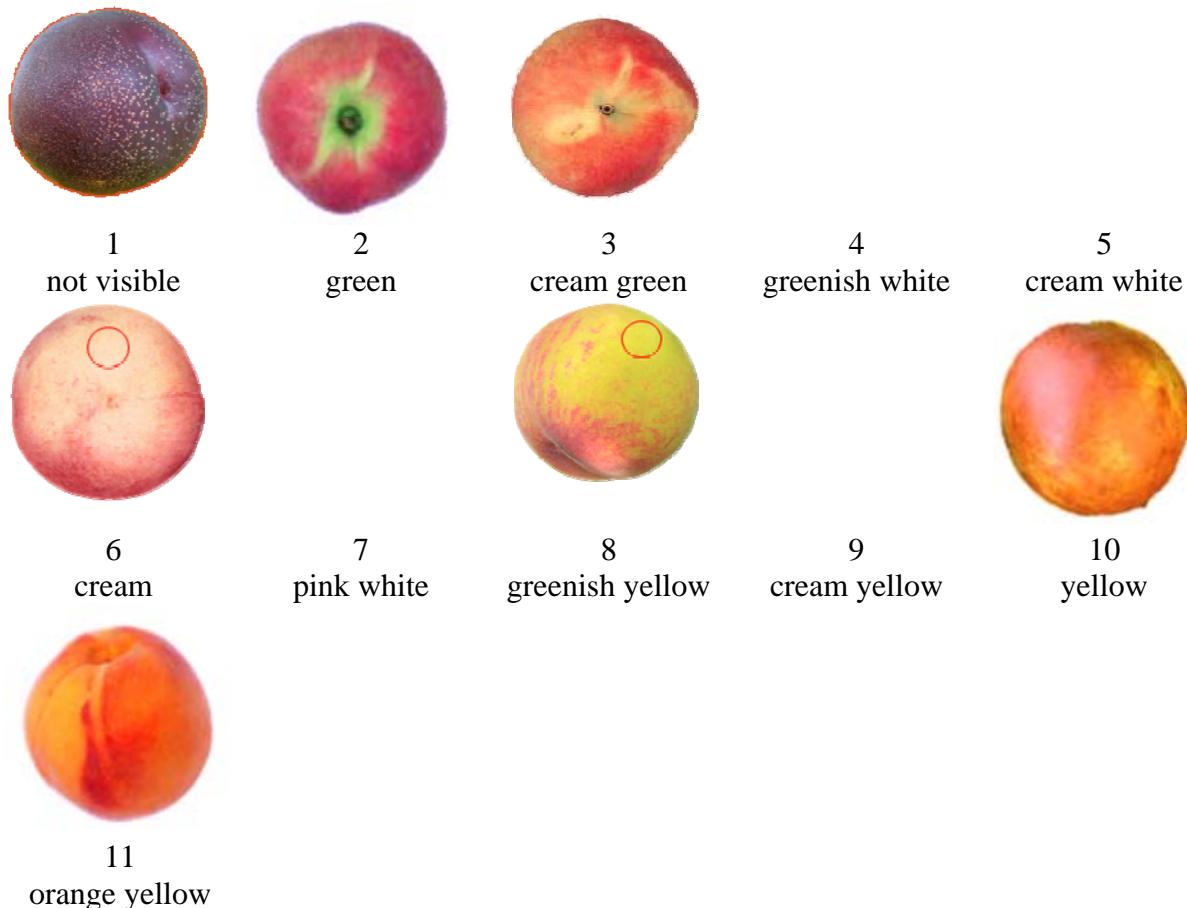

Ad. 38: Fruit: depth of stalk cavity

Ad. 39: Fruit: width of stalk cavity

Ad. 40: Fruit: ground color of skin

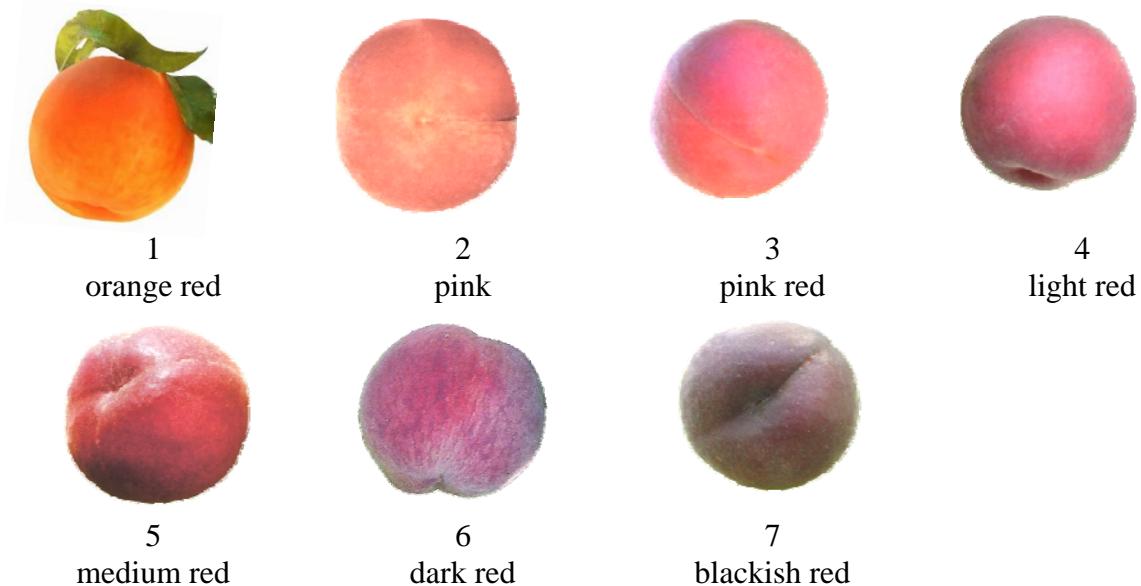

The ground color is the first color to appear chronologically during the development of the skin and upon which the over color will develop in time. It is not always necessarily the largest area of the skin.

Ad. 41: Fruit: over color of skin

Care needs to be taken that varieties with state 'absent' are completely in all conditions.

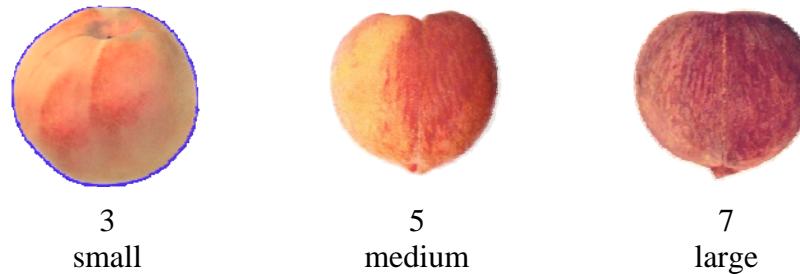

Ad. 42: Fruit: hue of over color of skin

Ad. 43: Fruit: pattern of over color

Ad. 44: Fruit: relative area of over color of skin

Ad. 46: Fruit: density of pubescence

3 sparse                    7 dense

Ad. 48: Only varieties with fruit pubescence: absent: Fruit: conspicuousness of lenticels

3 weak                    5 medium                    7 strong

The conspicuousness of lenticels is determined by the size and the color contrast.

Ad. 49: Fruit: thickness of skin

excluding pubescence

Ad. 51: Fruit: firmness of flesh

To be observed at eating ripeness with a penetrometer as the 'Durofel'.

Ad. 52: Fruit: carotenoid coloration of flesh

1  
greenish white

5  
yellow

6  
orange yellow

Ad. 53: Fruit: anthocyanin coloration of flesh next to skin

1  
absent or very weak

2  
weak

3  
strong

Ad. 54: Fruit: anthocyanin coloration of flesh in central part of flesh

1  
absent or very weak

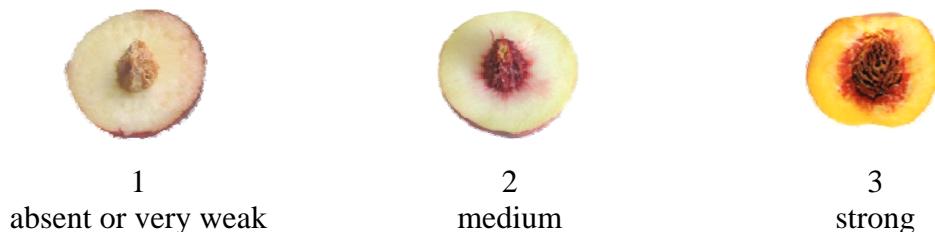

2  
weak

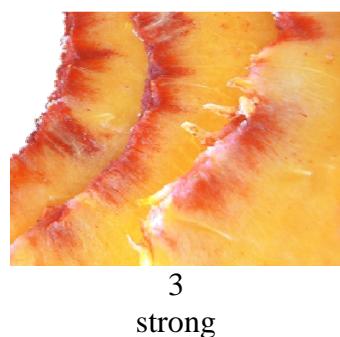

3  
strong

Ad. 55: Fruit: anthocyanin coloration of flesh around stone

Ad. 56: Fruit: flesh fiber

3  
strong

Ad. 57: Fruit: sweetness

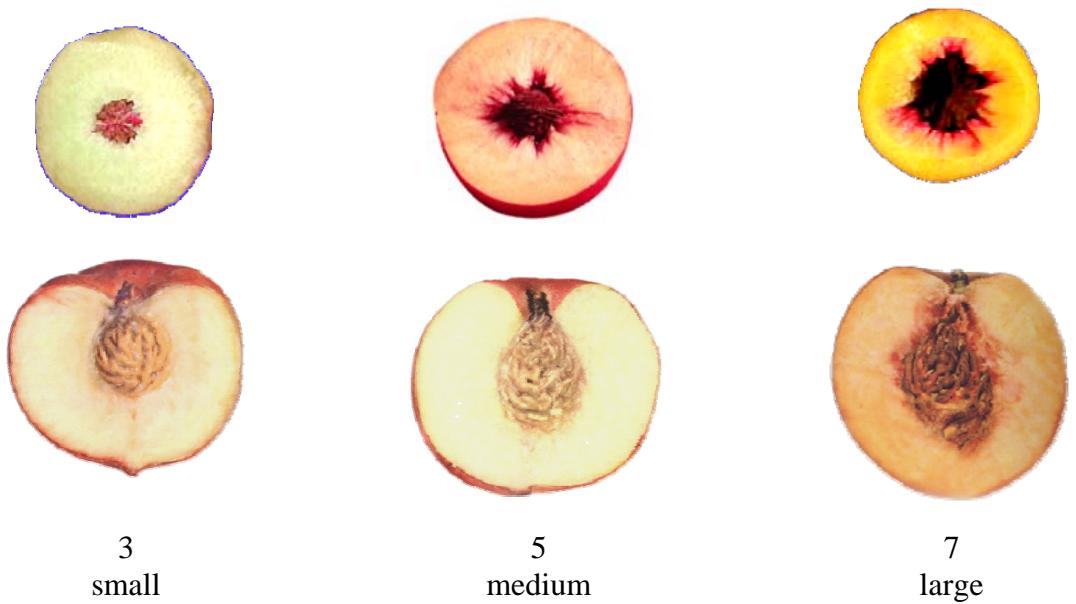

**EXPLANATION TO BE PROVIDED**

Ad. 58: Fruit: acidity (Acidity titrable) in meq 100/ml

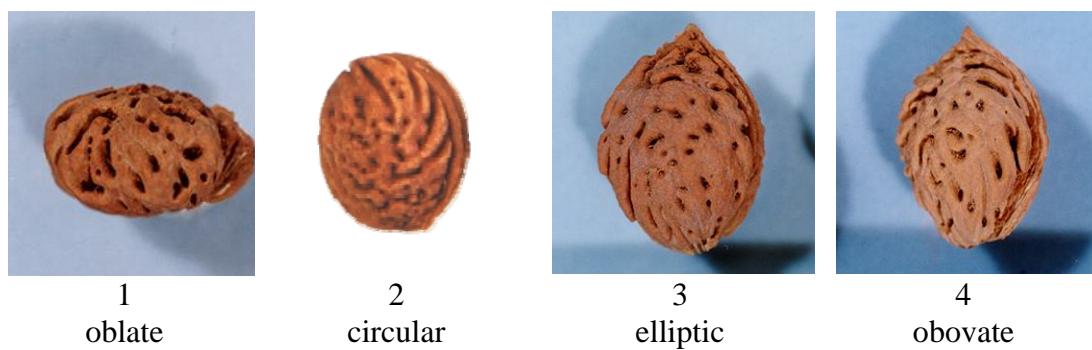

**EXPLANATION TO BE PROVIDED**

Ad. 59: Stone: size compared to fruit

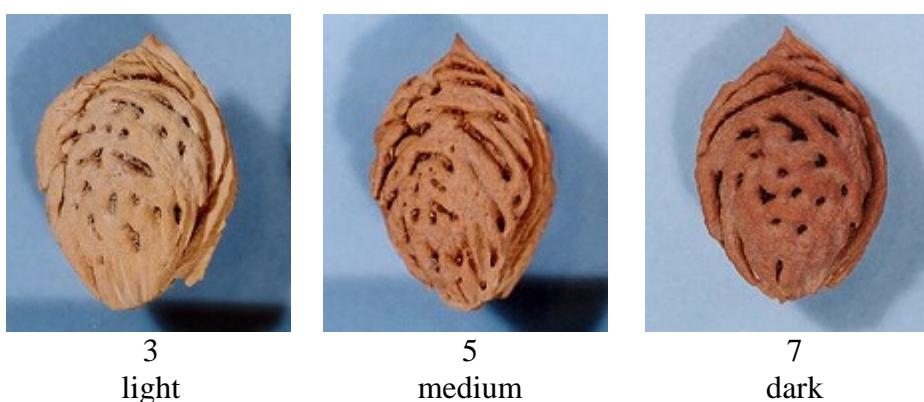

Ad. 60: Stone: shape (in lateral view)

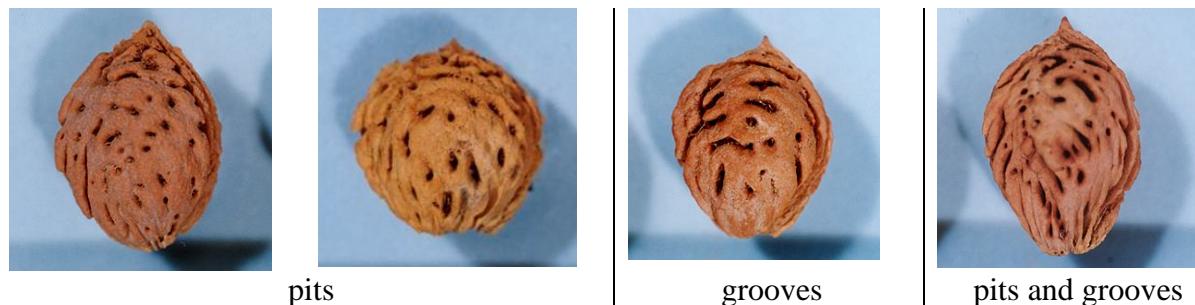

Ad. 62: Stone: intensity of brown color

To be observed on fresh stones.

Ad. 63: Stone: relief of surface

Ad. 64: Stone: tendency of splitting (at peak harvest)

Evaluated by the percentage of fruits having splitting stone.

Ad. 67: Time of beginning of leaf bud burst

The time of the beginning of leaf bud burst should be observed as the appearance of first leaves on all trees.

Ad. 68: Time of beginning of flowering

The time of beginning of flowering is when all trees have 10% open flowers.

Ad. 69: Time of maturity for consumption

The time of maturity for consumption is when the overall appearance, firmness and taste indicate that the fruit is ready for consumption.

10. Technical Questionnaire

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
		Application date: (not to be filled in by the applicant)
<p style="text-align: center;"><b>TECHNICAL QUESTIONNAIRE</b> to be completed in connection with an application for plant breeders' rights</p>		
1. Subject of the Technical Questionnaire		
1.1.1 Botanical name	<i>Prunus persica</i> (L.) Batsch var. <i>persica</i>	
1.1.2 Common name	Peach [...]	
1.2.1 Botanical name	<i>Prunus persica</i> (L.) Batsch var. <i>nucipersica</i> (Suckow) C. K. Schneid.	
1.2.2 Common name	Nectarine [...]	
2. Applicant		
Name		
Address		
Telephone No.		
Fax No.		
E-mail address		
Breeder (if different from applicant)		
3. Proposed denomination and breeder's reference		
Proposed denomination (if available)		
Breeder's reference		

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#4. Information on the breeding scheme and propagation of the variety

4.1 Breeding scheme

Variety resulting from:

4.1.1 Crossing

- (a) controlled cross [ ]  
(please state parent varieties)
- (b) partially known cross [ ]  
(please state known parent variety(ies))
- (c) unknown cross [ ]

4.1.2 Mutation [ ]  
(please state parent variety)

4.1.3 Discovery and development [ ]  
(please state where and when discovered  
and how developed)

4.1.4 Other [ ]  
(please provide details)

4.2 Method of propagating the variety

4.2.1 Vegetative propagation

- (a) cuttings [ ]
- (b) *in vitro* propagation [ ]
- (c) other (state method) [ ]

4.2.2 Other [ ]  
(please provide details)

---

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
Characteristics	Example Varieties	Note
<b>5.1 Flower: type</b> <b>(9)</b>		
campanulate	Dida, Springtime	1[ ]
rosette	Robin, Vesuvio	2[ ]
<b>5.2 Petiole: shape of nectaries</b> <b>(31)</b>		
round	Springtime	1[ ]
reniform	Redhaven	2[ ]
<b>5.3 Fruit: pubescence of skin</b> <b>(45)</b>		
absent	Daisy, Fantasis, Monco, Zaitabo	1[ ]
present	Merspri, Moncav, Rich May	9[ ]
<b>5.4 Fruit: carotenoid coloration of flesh</b> <b>(52)</b>		
greenish white	Charles Roux	1[ ]
white	Caldesi 2000, Springtime	2[ ]
cream white	Michelini	3[ ]
light yellow	Armking, Spring Gold	4[ ]
yellow	Early Sungrand	5[ ]
orange yellow	Lovel, Merril Franciscan	6[ ]
orange	Sungold	7[ ]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
Characteristics	Example Varieties	Note
<b>5.5 Fruit: acidity (Acidity titrable) in meq 100/ml (58)</b>		
low	Big Boum, Bigtop, Emeraude, Felicia//Monprime, Zaifuro, Zairesu	2[ ]
medium	Maillarboom, O'Henry, Ryan Sun, Zaitabo	3[ ]
high	Craucail, Hermione, Nectacross, Orion, Primerose, Richmay, Zainara	4[ ]
<b>5.6 Fruit: flesh type</b>		
melting		[ ]
non-melting (pavies)		[ ]
stony hard		[ ]
<b>5.7 Stone: adherence to flesh (65)</b>		
absent	Fairhaven, Fuzalode	1[ ]
present	Sweet Gold, Vivian	9[ ]
<b>5.8 Time of beginning of flowering (68)</b>		
very early	Zaibop, Zaitolio	1[ ]
early	Richlady, Springtime	3[ ]
medium	Monnude, Zaitabo	5[ ]
late	Maillarflat, Maillarlau	7[ ]
very late	Summerqueen	9[ ]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
Characteristics	Example Varieties	Note
<b>5.9 Time of maturity for consumption (69)</b>		
very early	Ricmay, Springtime Zaibaro	1[ ]
very early to early	Zainoar, Zaitani	2[ ]
early	Antonia, Redwing, Rich Lady, Robin	3[ ]
early to medium	Craucail, Diamond Princess	4[ ]
medium	Fairhaven, Fantasia, Summer Bright, Zee Lady	5[ ]
medium to late	Maillarbig, Savana red, Zaimor	6[ ]
late	Fairlane, Flacara, Veteran, Western red, Zailati, Zairova	7[ ]
late to very late	Andgold, Tardibelle	8[ ]
very late	Firetime, Rubidoux	9[ ]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

6. Similar varieties and differences from these varieties

*Please use the following table and box for comments to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.*

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the <b>similar</b> variety(ies)	Describe the expression of the characteristic(s) for <b>your</b> candidate variety
<i>Example</i>	<b>TO BE PROVIDED</b>		

Comments:

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#7. Additional information which may help in the examination of the variety

7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics which may help to distinguish the variety?

Yes [ ] No [ ]

(If yes, please provide details)

7.2 Are there any special conditions for growing the variety or conducting the examination?

Yes [ ] No [ ]

(If yes, please provide details)

7.3 Other information

7.3.1 A representative color photograph of the variety should accompany the Technical Questionnaire.

7.3.2 Pollinator

Good pollinators are the following varieties

.....

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [ ] No [ ]

(b) Has such authorization been obtained?

Yes [ ] No [ ]

If the answer to (b) is yes, please attach a copy of the authorization.

---

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- (a) Microorganisms (e.g. virus, bacteria, phytoplasma) Yes [ ] No [ ]  
(b) Chemical treatment (e.g. growth retardant, pesticide) Yes [ ] No [ ]  
(c) Tissue culture Yes [ ] No [ ]  
(d) Other factors Yes [ ] No [ ]

Please provide details for where you have indicated “yes”.

.....

9.3 Virus status

The variety is

- (i) virus free [ ]  
(indicate viruses)
- .....
- (ii) virus tested [ ]  
(indicate against which virus)
- .....
- (iii) The virus status is unknown [ ]

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
