PROPOSALS FOR AMENDING THE UPOV CODE SYSTEM AND UPOV CODES UPOV Code System

8. The guide to the UPOV code system (document UPOV/INF/23 "UPOV Code System") was adopted by the Council on September 21, 2021, and is available on the UPOV website at https://www.upov.int/genie/resources/pdfs/upov_code_system_en.pdf (see document C/55/12 "Outcome of consideration of documents by correspondence", paragraph 32).

Proposals for the revision of document UPOV/INF/23 "Guide to the UPOV code system"

Maximum number of characters in the appended element to UPOV codes

9. The TC, at its fifty-seventh session¹, considered a proposal to clarify the maximum number of characters to be used in the appended element to UPOV codes, as set out in document UPOV/INF/23 "UPOV Code System", and agreed to request the Office of the Union to develop a proposal for consideration by the TWPs and the TC, at their sessions in 2022 (see document TC/57/25 "Report", paragraph 35).

10. At their sessions in 2022, the TWV², TWA³, TWO⁴, TWF⁵ and TWM⁶ considered a proposal developed by the Office of the Union and agreed to revise document UPOV/INF/23 "Guide to the UPOV Code System" as follows (see documents TWV/56/22 "Report", paragraph 7; TWA/51/11 "Report", paragraph 23; TWO/54/6 "Report", paragraph 22; TWF/53/14 "Report", paragraph 7; and TWM/1/26 "Report", paragraph 7) (deletions indicated with highlighting and ~~strikethrough~~; additions indicated with highlighting and underline):

"5 UPOV CODE: APPENDED INFORMATION

5.1 Appended element construction

"5.1.1. Where required, an element may be appended to a UPOV code to provide information on the variety group, variety type and/or denomination class.

"The appended element to UPOV codes is identifiable through the following naming convention:

- "A digit (number from 1 to 9) prefix identifies the new appended element.
- "Different digits or letters could, if appropriate, indicate different categories of information.
- "The appended element should contain a maximum of six digits or letters in total (e.g. '1AC2TG')

"This element may be appended to any UPOV code, regardless of plant taxa (genera, species or subspecies levels). Examples:

"UPOV code for genus *Abies*: ABIES
"UPOV code with appended element: ABIES _1234 1AC2TG

"UPOV code for species *Abies sibirica*: ABIES_SIB
"UPOV code with appended element: ABIES_SIB _1234 1AC2TG

"UPOV code for sub-species *Abies sibirica* subsp. *semenovii*: ABIES_SIB_SEM
"UPOV code with appended element: ABIES_SIB_SEM _1234 1AC2TG

Correction of cross-references to document UPOV/EXN/DEN

11. Cross-references to document UPOV/INF/12 "Explanatory Notes to Variety Denominations under the UPOV Convention" should be corrected and replaced by UPOV/EXN/DEN in paragraphs 4.2 and 4.3 of document UPOV/INF/23, as follows:

4.2 Inter-generic and inter-specific hybrids

4.2.6 In the case of UPOV codes for hybrid genera and species, the UPOV code will not distinguish between two hybrids produced using the same parents. A UPOV code is created for the first hybrid notified to UPOV in accordance with the procedure set out in paragraphs 2.2.3 to 2.2.5 4.2.3 to 4.2.5. However, if a subsequent request is received for a hybrid involving the same genera/species in a different combination, the Principal Botanical Name will be amended to indicate that the UPOV code covers all combinations involving the same genera/species."

“4.3 Introduction of New UPOV Codes / Amendments to UPOV Codes”

“(d) In general, amendments to UPOV codes will not be made as a result of taxonomic developments unless these result in a change to the genus classification of a species. The “Explanatory notes on variety denominations under the UPOV Convention” (document UPOV/INF/12 UPOV/EXN/DEN) contain UPOV variety denomination classes; for genera and species not covered by the List of Classes in Annex I to document UPOV/INF/12 UPOV/EXN/DEN, the general rule (“one genus / one class”) is that a genus is considered to be a class (see document UPOV/INF/12 UPOV/EXN/DEN, Section 2.5-2 4.5.2 and its Annex I). Proposals for amending UPOV codes

Replacing complex botanical nomenclature by variety groups

Background

12. The TC, at its fifty-seventh session⁷, agreed to amend the UPOV codes for *Beta vulgaris*, *Brassica oleracea*, *Citrus* and *Zea mays*, as reproduced in the Annex to this document (see document TC/57/25 “Report”, paragraphs 69 to 80).

13. The TWV, at its fifty-sixth session⁸, received presentations on “Use of Variety Groups in the UPOV system for *Brassica oleracea* and other vegetable crops” and “UPOV codes for *Cichorium intybus*” from an expert from the Netherlands. A copy of the presentations is provided in documents TWV/56/13 and TWV/56/15, respectively (see document TWV56/22 “Report”, paragraphs 26 to 30).

14. The TWV, at its fifty-sixth session, agreed that variety groups should be used to replace complex infra-specific botanical names, such as for *B. vulgaris*, *B. oleracea* and *C. intybus*. The TWV agreed to invite the Netherlands to further develop the proposal to create variety groups for *B. vulgaris*, *B. oleracea* and *C. intybus*, to be presented at the fifty-seventh session of the TWV.

15. The TWV, at its fifty-sixth session, agreed to invite the Office of the Union to develop proposals for revising the UPOV codes with appended information according to the approach to use variety groups for complex botanical names, to be presented at the fifty-seventh session of the TWV.

16. The TWV, at its fifty-sixth session, recalled that, at its fifty-fourth session, it had noted that approximately 1,200 varieties with UPOV code CICHO_INT in the PLUTO database could not be allocated with certainty to any variety group. The TWV agreed to invite contributors to the PLUTO database to further precise whether the varieties belonged to the groups “forage-”, “industrial-”, “leaf-” or “witloof-chicory”.

Proposal

17. Following the proposal by the TWV to replace complex infra-specific botanical names by variety groups, the TC may wish to consider revising its decision, at the fifty-seventh session, to append information to the UPOV codes for *Beta vulgaris*, *Brassica oleracea* and *Citrus* and *Zea mays*.

UPOV codes for Beta vulgaris

18. It is proposed that the TC consider inviting the TWA and TWV, at their sessions in 2023, to consider the following proposal to create variety groups to the UPOV codes for *Beta vulgaris* L. ssp. *vulgaris*, and consider whether to delete the UPOV code BETA_VUL_GV to avoid the situation where a variety cannot be allocated with certainty to any variety group.

MATTERS FOR INFORMATION

GENIE database

Background

32. The GENIE database (<http://www.upov.int/genie/en/>) has been developed to provide online information on the status of protection, cooperation in examination, experience in DUS testing and existence of

UPOV Test Guidelines for different GENera and specIES (hence GENIE). The GENIE database is used to generate the relevant Council and TC documents concerning that information¹¹.

33. The GENIE database is the repository of the UPOV codes and provides information concerning the principal and alternative botanical names and common names of plant taxa.

UPOV code developments

34. In 2021, 131 new UPOV codes were created. The total number of UPOV codes in the GENIE database as of December 31, 2021 was 9,342.
